INTRODUCTION

The Massachusetts Department of Public Health, Bureau of Substance Abuse Services (BSAS) annually releases this report to provide a socio-demographic profile of admissions to publicly funded substance abuse treatment during the preceding fiscal year for the twenty seven Community Health Network Areas (CHNAs) in Massachusetts. Data for this report come from the BSAS's Substance Abuse Treatment Management Information System (SAMIS).¹ The report is composed of this introduction and a set of tables. For each CHNA, there is a table breaking down the socio-demographic characteristics of admissions to publicly funded substance abuse treatment. Each table presents statistics for the CHNA next to the region and state averages. At the end of each table, there is a list of towns contained in the CHNA. The CHNA tables are grouped by region in the following order: Western, Central, Northeast, Metrowest, Southeast and Boston.

This current report presents information for Fiscal Year 2000 (FY 2000).² There were a total of 120,950 admissions to BSAS-funded substance abuse treatment in FY 2000, including 119,210 primary and 1,740 collateral admissions³ to treatment. Among the primary admissions were 2,791 admissions from correctional institutions and 1,022 out-of-state residents. This report includes data on the 115,397 primary admissions who were not from correctional institutions and who were residents of Massachusetts.

This report provides information on eleven variables describing admissions to publicly funded substance abuse treatment during FY 2000. The eleven variables are:

1. **Gender**—the numbers of male and female admissions.
2. **Age**—the numbers of admissions in the following age categories: under 21, 21 to 29, 30 to 39, 40 to 49 and 50 or older.

¹ Every substance abuse treatment program in Massachusetts that receives any funding from BSAS is required by licensing regulations to complete an admission form for every client they treat and submit the data from this form to BSAS. BSAS enters these data into their Substance Abuse Treatment Management Information System (SAMIS) where they are available for subsequent analysis. SAMIS data include information on treatment admissions' demographics, socio-economic status and substance abuse history. See Camp, J. M., Krakow, M., McCarty, D., and Argeriou, M., 1992, "Substance abuse treatment management information systems: Balancing Federal, State and Service Provider Needs", pages 5-20, *The Journal of Mental Health Administration* 19:1, for further details.

² The fiscal year in Massachusetts runs from July 1 through June 30. Since this report is for FY 2000 it covers the period from July 1, 1999 through June 30, 2000.

³ Collateral admissions are not seeking substance abuse treatment for themselves but are seeking help in dealing with issues that they are facing, regarding someone else's substance abuse problem.

3. **Race/Ethnicity**—the numbers of admissions who were Asian, who were Black Non-Latino, who were white non-Latino, who were Latino and who were of other race/ethnicity.
4. **Marital Status**—the numbers of admissions who were never married, who were married, and who were not married now (i.e. separated, divorced or widowed).
5. **Education**—the numbers of admissions who had less than a high school education, who had completed high school and who had education beyond high school.
6. **Employment Status**—the number of admissions who were working.
7. **Homelessness**—the number of admissions who were homeless – living on the streets or in a shelter or mission.
8. **Prior Mental Health Treatment**—the numbers of admissions who had no prior mental health treatment history, who had some prior mental health treatment (counseling or one prior mental health hospitalization) and who can be considered to be dually diagnosed (more than one prior mental health hospitalization).⁴
9. **Primary Drug**—the numbers of admissions reporting the following drugs as their primary substance of abuse: alcohol, heroin, cocaine, crack, marijuana and other drugs.
10. **Substance Use in Past Year** - the numbers of admissions who used the following substances in the year preceding admission: alcohol, cocaine, crack, marijuana, and heroin. Note that these categories are not mutually exclusive as many admissions used more than one drug in the year prior to admission.
11. **Needle Use in Past Year**—the number of admissions who injected drugs in the year preceding admission.⁵

⁴ While we do not have an actual dual diagnosis designation, BSAS has used two or more hospitalizations for mental health problems as an indicator of dual diagnosis.

⁵ These are the same data that can be found in previous CHNA Reports under the variable “injection drug user admissions to programs”.
